

API4INSPIRE

Facilitating access to INSPIRE data through standard-based Application Programming Interfaces

Jürgen Moßgraber, Hylke van der Schaaf (Fraunhofer IOSB), Kathi Schleidt (DataCove)

What is INSPIRE?

- Directive 2007/2/EC establishing an **Infrastructure for Spatial Information** in the European Community
- Covers **34 Spatial Data Themes** grouped into 3 Annexes
- OGC based UML conceptual models created by TWGs, formalized in Implementing Rules (IR), XSD automatically generated
- Implementing Rules also govern metadata, view & download services
- Finalization date for data from Annex II & III fall 2020
- **Current status: >100 000 datasets; ~7,000 institutions** (and rising. Note: To date, most available datasets have not been harmonized)

Why APIs in INSPIRE?

- State-of-play

- Most services in INSPIRE geoportal are based on W*S/OWS services
- APIs still emerging within OGC
- Huge interest in APIs within the INSPIRE community
- Few documented implementations of APIs in INSPIRE

- European agenda

- European Strategy for Data
 - Sector-specific data spaces
 - Connecting different actors
- Open Data Directive
 - High-Value Datasets (harmonised, documented and available through APIs)
- INSPIRE MIWP 2020 - 2024
 - Standard-based APIs are one of the means for modernising INSPIRE's technological stack

Why APIs in INSPIRE?

APIs provide an excellent opportunity for INSPIRE

1) Increase the use of the infrastructure

- INSPIRE → mainstream ICT
- Improve the discoverability through search
 - DWBP and SDWBP
 - *DWBP Best Practice 23: Make data available through an API*
 - *SDWBP Best Practice 12: Expose spatial data through 'convenience APIs'*

2) Leverage on grassroots standardisation

- Novel approaches at the OGC (OGC API-Features and SensorThingsAPI)
 - Hackathons
 - Multiple early implementations
 - Co-creation of specifications

API4INSPIRE

- Implemented under the ISA² ELISE Action
 - European Location Interoperability Solutions for e-Government
- Based on demand
 - Requested by MS at the ISA² working group on geospatial solutions
- Novel approach
 - Providers on board
 - Learning from hands-on experiences
- Tasks
 - Evaluation Methodology - Benefits & Efforts
 - Deployment Strategies for OGC API - Features & OGC SensorThings API
 - Deployment of API endpoints
 - Guidelines / technologies, lessons learned
 - Provide evidence for INSPIRE Good Practices with these APIs

API4INSPIRE - Data Providers

- Austrian Meteorological Agency (ZAMG) [AT]
- Austro Control (ACG) [AT]
- Austrian Environment Agency (UBA) [AT]
- European Environment Agency (EEA) [EU]
- City of Hamburg (CH) [DE]
- French Geological Survey (BRGM) [FR]
- Office for Biodiversity (OFB) + "INSIDE" - environmental information systems research center (BRGM+OFB) [FR]
- Environment Agency Baden-Württemberg (LUBW) [DE]

OGC APIs

- OGC is defining a new set of services to replace the currently used OWS (20 years old)
- These new services are collectively identified as OGC APIs.
- They are Web APIs, sometimes referred to as **RESTful services**.
- Each service is described by an **OpenAPI document**.
- Each of them is geared towards JSON based representations of resources:
 - Other encodings are supported, **e.g. HTML, XML**.
- Each service has a minimal core, and **numerous optional extensions to add functionality**.

Service Capabilities

FEATURES

1.0

IMAGES

OGC API - Features

- Can be found at:
<https://github.com/opengeospatial/ogcapi-features>
- In addition to OGC API (OAPI) core:
 - **/collection/{collectionId}/items (features)**
 - **/collection/{collectionId}/items/{itemId}**
- Only supported CRS are:
 - CRS84 (WGS84 lon/lat)
 - CRS84h (WGS84 lon/lat/height)
- No mandated schema, features can be anything:
 - Simple (SF-0)
 - Complex (SF-1, SF-2e)

Extensions! Some are already in the making:

OGC SensorThings API

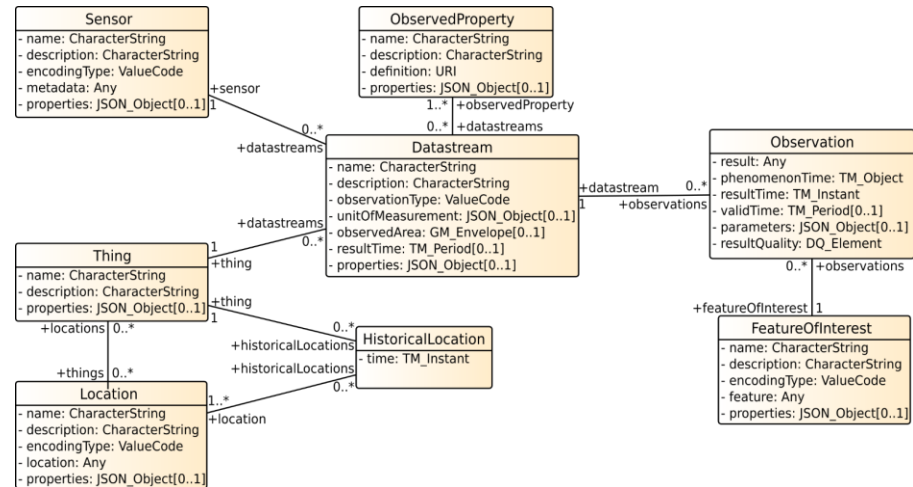

<https://github.com/FraunhoferIOSB/FROST-Server>

The successor to SOS

- REST + JSON + Full Editing
- O&M Based Data Model
 - Extendible properties
- Powerful OData Queries
 - Across the entire data model
 - Composable response data
- Scalable
 - Thousands of stations
 - Millions of observations
- Understandable
 - Follow the links to *all* data

Caveat: In contrast to OGC APIs, OGC SensorThings API is based on the **OData API Model**

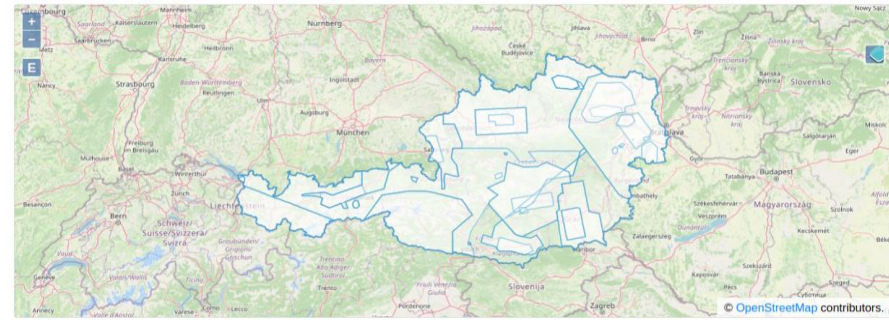

Data Nests

Sets of colocated and complementary data sources exposed by the APIs under evaluation:

- **Airy Austria**
Air Transport information complemented by meteorological data
- **Urban Data Platform Hamburg**
Smart City Sensors together with road transport networks
- **Franco-Germanic Flow**
Cross-border water: surface & ground, quality & quantity, flood zones
- **Covid ad-hoc**
Realtime air quality, Covid-19 case data complemented by a background demography layer

Airy Austria

Air Transport information & meteorological data.

This nest consists of the following data providers and end points:

- **Austro Control** is the air navigation services provider that controls Austrian airspace

WFS2: <https://sdigeo-free.austrocontrol.at/geoserver/tn-a/wfs?service=WFS&version=2.0.0&request=GetCapabilities>

OGC API: <https://inspire.austrocontrol.at/ogcapi/ogc/features>

- **Austrian Meteorological Agency (ZAMG)** has a wide range of expertise at its disposal pertaining to all aspects of meteorological data management and provision

Urban Data Platform Hamburg

The **City of Hamburg** has long seen the potential of Smart City technology, and been involved in diverse Smart City initiatives, successively extending their smart sensor infrastructure to an ever widening usage area.

Endpoint: <https://iot.hamburg.de/v1.0>

- Charging stations for electric cars
- Bike sharing stations from StadtRad
- Data from the Energy Campus of the Hamburg University of Applied Sciences

Future plans: A Lot!

- Traffic lights, traffic density, etc...

Franco-Germanic Flow

- The French Geological Survey (**BRGM**) has long been involved in pushing the envelope pertaining to the possibilities of environmental data provision.
- Along with the French Office for Biodiversity (**OFB**) and their joint research center on information system (**INSIDE**), they provide access to (linked) datasets from various French Information Systems on Water, Underground Risk using

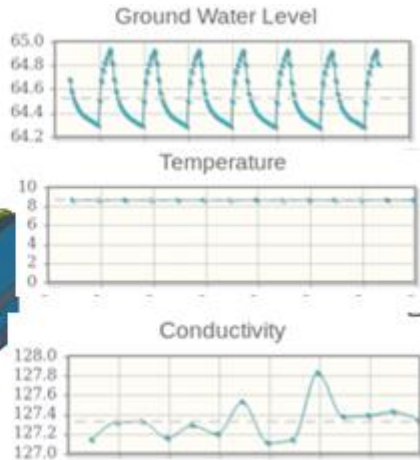

- The Environment Agency Baden-Württemberg – **LUBW** provides diverse water resources within Germany.
